

SENIOR EXPLORATION GEOLOGIST

Central Australia

Opal Horizon Limited ("OHZ") is an, as yet, unlisted public Australian company which over the last 8 years has made significant advances in exploration for sedimentary precious opal. Approximately 95% of the world's production of precious opal comes from the remote widely scattered opal fields of outback Australia.

In the last two years, the company has made four major new precious opal discoveries in southwestern Queensland and is currently mining opal from one of these. Mining of a second deposit is expected to begin in 2009.

OHZ is seeking the services of a Senior Exploration Geologist with around 10 year's exploration experience. Mine geology experience would also be advantageous as the position involves some mine mapping and mine supervisory work. Previous experience with precious opal or other gemstones is not necessary although experience with exploration in sedimentary terrains would be an advantage.

The applicant must have good computer literacy and the ability to work in remote locations for up to 3 to 4 weeks at a time. The position will be based in Brisbane. Ultimately it is likely that, subject to the applicant acquiring the necessary skills to explore for, and develop, precious opal mines, they would progress to the position of Exploration Manager.

A competitive remuneration package will be offered to the successful applicant. Applications must include a resume and the names and contact details of at least two referees.
